Dach- und Abdichtungssysteme

The new dimension of sustainability

POLYFIN AG

Within POLYFIN roof- and waterproofing sheets you opt for CO₂-neutrality and thus contribute for climate protection on your flat roof.

CO₂ NEUTRAL WITH ONE CLICK

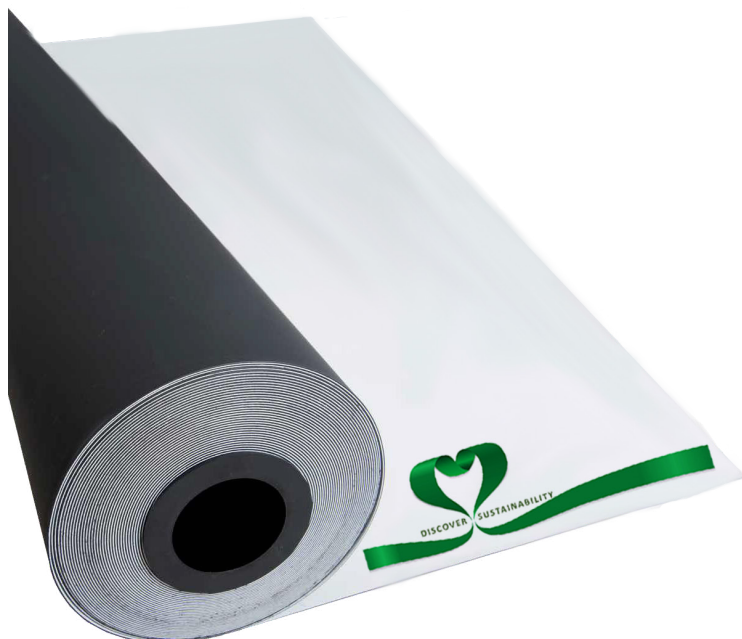

With roof- and waterproofing sheets from POLYFIN it is your opportunity, to make an active contribution to climate protection.

Every product can be ordered as a CO₂-neutral product by a single click.

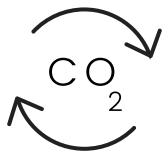

The certificate for the CO₂-neutral roofing sheet is issued after completion of the flat roof and can be used for your own sustainability reporting and for building certifications. The certificate is issued by a GOLD Standard certified partner and meets the greatest international requirements.

Based on Polyfin's EPD (environmental product declaration), the CO₂-amount for the respective project is determined and used by the GOLD Standard certified partner into offsetting measures to compensate for CO₂ emissions.

The GOLD standard is currently the highest standard for CO₂-compensation.

ADVANTAGES AT A GLANCE

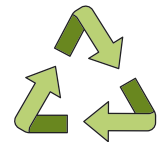

CO₂ NEUTRAL

Improve the CO₂-foot print with one click

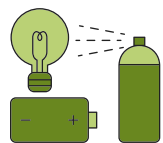

LONG-LASTING

Long-life expectancy

PVC-FREE

Durable flexibility

HALOGEN-FREE

No corrosive flue gas in case of fire

SUSTAINABLE

Latest EPD for certifications like DGNB, etc.

FREE OF SOFTENERS

No migration of softeners and therefore continuous flexibility
